

August is DENTAL MONTH

DISCOUNTED DENTAL PROCEDURES

Has your pet had their teeth checked in the last 6–12 months, if not give us a call on (07) 4152 0009 or book an appointment online for your **COMPLIMENTARY** dental check.

In this appointment we can also discuss different options that you can do at home to help prevent dental disease.

**For the month of August we are offering
20% off dental scale and polishes
AND 20% off tooth extractions.**

THE IMPORTANCE OF DENTAL CARE

Periodontal disease, affects much more than just the tooth. As periodontal disease progresses, bacteria grow and begin to enter the surrounding tissue.

If left untreated the infection results in discharge of debris, bacteria and toxins into the blood stream, which can affect the heart, kidneys, lungs and liver.

HEART

KIDNEYS

LUNGS

LIVER

Approximately 70% of cats and 80% of dogs will have dental disease by the age of three.

Humans have 32 adult teeth, while cats have 30 and dogs 42.

Pets require daily homecare and regular professional cleaning, just like humans.

THE IMPORTANCE OF DENTAL HOMECARE

The most effective way to clean your pet's teeth at home is combining mechanical and chemical cleaning, in the same way humans do – daily brushing. However, when first introducing your pet to dental homecare, brushing their teeth may be difficult if they are unfamiliar with this practise.

With that in mind Oxyfresh developed the Dental Cleaning Kit and Dental Water Additive. The Cleaning Kit Gel can be used with or without brushing, and is tasteless and odourless.

DENTAL WATER ADDITIVE

This makes it the perfect product when introducing your pet to dental homecare. The Gel can be applied to the gums and works to eliminate bad breath at the source, as well as reduce plaque and tartar build up, with its patented blend of Oxygene and zinc.

A finger brush is supplied in the **Oxyfresh Dental Cleaning Kit** and once your pet is comfortable with the Gel being applied, you can slowly introduce mechanical cleaning with brushing.

If brushing your pet's teeth is not possible, then try **Oxyfresh Water Additive**. Simply add one capful to your pet's drinking water daily to reduce plaque and tartar, soothe gum and mouth irritation and eliminate bad breath.

DENTAL CLEANING KIT
